Sequence 86408, Application US/09949016

Patent No. 6812339

HIGHERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: 60/29/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/231,768

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FasteEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-949-016-173059

US-09-949-016-12327

Sequence 12327, Application US/09949016

Retent No. 6812339

GENERAL INFORMATION:

APPLICANTY VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMONPHISMS IN KNOWN GENES ASSOCIATED

FILE REFERENCE: CLOOL307

CURRENT FILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-04-14

PRIOR PELICATION NUMBER: 60/237,768

PRIOR PELING DATE: 2000-10-03

Sequence 14219, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-07-27

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 14219

LENGTH: 216

TENGTH: 216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

CURRENT APPLICATION DATA:

APPLICATION MURBER: US/08/673,799C

FILING DATE: 27-10N-96

FILING DATE: 27-10N-96

CLASSIFICATION: 536

TELECOMMUNICATION: NINCORMATION:
TELEPHONE: (703)816-4100

INFORMATION FOR SEQ ID NO: 90:
SEQUENCE CHARACTERISTICS:
LENGTH: 390 base pairs
TYPE: nucleic acid
STRANDEDNESS: double
TYPE: nucleic acid
STRANDEDNESS: adouble
TOPPLOGY: linear
MOLECULE TYPE: other nucleic acid
STRANDEDNESS: adouble
CORGINAL SOURCE:
ORGANISM: Homo sapiens and mouse
FRATURE: NAME/KEY: sig_peptide
LOCATION: -22...1
IDENTIFICATION METHOD: by similarity with known sequence or to an established co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FIGURIAL TO A TRANSPORT OF THE TRANSPORT OF TO AN ESTABLISHED CONTROL OF THE TRANSPORTION: / product = "CDR1"
